SUMMARY

MS Data Science graduate from CU Boulder (GPA 3.9/4.0, May 2026) with hands-on experience turning operational data into actionable insights through cost models, drift quantification, dashboards, and predictive analysis. Built a falsifiable cost model that reversed a proposed AI pipeline re-architecture as an AI Engineering Intern at Bright Machines, and reduced manual reporting by 40% via automated ETL and Power BI pipelines. Seeking Data Analyst or Business Analyst roles where clear storytelling drives business decisions.

SKILLS

Analytics & Querying: SQL (PostgreSQL, MySQL; CTEs, window functions, joins), Python (pandas, NumPy), R; cost modeling, drift/variance quantification, hypothesis testing, controlled experiments

Visualization & BI: Tableau, Power BI (DAX, drill-downs), Plotly, Excel (PivotTables, Power Query), Databricks (Unity Catalog, Genie); KPI design, dashboard development, storytelling with data

Data Engineering: ETL pipeline design, data modeling, data quality checks, schema validation, PostgreSQL, MongoDB, Databricks; Azure DevOps, ServiceNow integrations

Machine Learning & Cloud: scikit-learn, XGBoost, Random Forest, Logistic Regression; AWS (S3, Lambda, EC2), Docker, Git/GitHub

WORK EXPERIENCE

AI Engineering Intern - Bright Machines

Jun 2026 – Present | San Francisco, CA

- Framed the analysis for leadership: at a \$100 per hour loaded rate, the proposal's maximum annual saving was worth three minutes of engineering time; stated the falsifiable breakeven threshold.
- Could not corroborate a claimed \$10K AI credit; found instead a \$15K non-rolling commit needing renewal that week, and dissolved the sovereignty objection that had stalled the ticket six weeks.
- Traced a scheduled report saving all zeros as normal (a naive timestamp expanded inside UTC pods) plus three more mechanisms hiding the same failure; shipped guards with 364 test lines.
- Measured and corrected published capability figures across documentation (about 100 to 132 tools measured), recording the method beside each figure so it could be re-derived rather than trusted.

Data Science & Engineering Intern - Nexus Weather & Climate

May 2025 – May 2026 | Boulder, CO

- Designed and maintained a standardized model evaluation framework tracking MAE and MSE across 6 model types against pre-ML baselines; produced stakeholder-ready reporting artifacts for executive review.
- Performed in-window and out-of-window generalization analysis to assess model accuracy on unseen data; communicated findings through structured verification reports for non-technical leadership.
- Implemented an automated data quality gate rejecting model outputs that fail accuracy thresholds before downstream use; reduced failed pipeline runs by 90% and saved 20 engineer-hours monthly.

Software Developer - Kopf Lab, University of Colorado Boulder

Dec 2025 – May 2026 | Boulder, CO

- Standardized stable isotope data ingestion across vendor formats; enforced consistent schemas, field names, and units with data quality checks for reproducible downstream statistical analysis.
- Maintained a structured data artifact inventory tracking sources, formats, and provenance assumptions; designed a multi-user Shiny application with Keycloak OIDC for organized, auditable data access.

EDUCATION

University of Colorado, Boulder

Aug 2024 – May 2026 | Boulder, CO

Master's in Data Science (GPA: 3.9/4.0)

Mumbai University, Rajiv Gandhi Institute of Technology

Jul 2020 – May 2024 | Mumbai, India

B.E. in Computer Engineering (GPA: 3.7/4.0)

PROJECTS

Denver International Airport Analytics | Python, Power BI, Power Query

Oct 2024

- Integrated ServiceNow and Azure DevOps operational datasets via Python ETL; built dual interactive dashboards with drill-downs for SLA status and bottleneck detection, reducing manual reporting by 40%; placed 3rd.

Netflix Content & Engagement Dashboard | Tableau, Mapbox, SQL

May 2023

- Analyzed 8,800+ Netflix titles to surface content strategy insights: 68/32 movie-TV split, top genres, and post-2015 growth; built an interactive Tableau dashboard with choropleth mapping.
